Installation

Before using the winch, make sure all electrical components have no corrosion or damaged; the environment should be clear and dry.

► Winch and hawse fairlead mountings

- It is very important that the winch will be mounted on a flat and hard surface of mounting channel in order to make sure the motor, drum and gearbox housing are aligned correctly.
- Hawse fairlead does not mount to winch directly.
- The synthetic rope shall be wound in an under-wound orientation only.
- Four (4) M8 x 30L 8.8 grade high tensile steel bolts must be used in order to sustain the loads imposed on the winch mountings.
- Two (2) M8 x 20L 8.8 grade high tensile steel bolts must be used for fastening the hawse fairlead into the mounting channel.

► Wiring Diagram

- Connect positive/negative terminal cables to the winch motor.
- Attach the ground lead firmly to the negative (-) battery terminal and power lead to the positive (+) battery terminal. The voltage drop for the winch motor must not exceed 10% of the nominal voltage of 12V DC.

► Nut fastening for motor & contactor

1. Holding the lower nut on the stub and fastening the upper nut clockwise.
2. The torque setting for nut is 50 lb-in.

Warning

- The winch is not intended to be used in any manner for the movement or lifting of personnel.
